

Adam Males.

Design leader with 12 years on complex B2B SaaS products. Led design on two company-defining initiatives: Matillion's VM-to-SaaS platform transition and Algolia's agentic UX direction. Comfortable building teams, influencing exec-level decisions, and staying hands on in the work. Most engaged where the problems are genuinely hard and the product has to ship.

Experience — 2014 to present

Algolia Mar 2025 – Present

Staff Product Designer

B2B SaaS · AI search & developer tooling · Remote

- **Led design of AskAI**, Algolia's agentic search product inside DocSearch. Reframed the launch from speed-to-ship to adoption risk, driving 86 completed setups, 26.7% completion, and zero configuration-related support tickets in the first 30 days. Pattern later reused in Agent Studio.
- Defined Algolia's approach to agentic UX across design patterns, guardrails, and interaction models for LLM-driven experiences.
- Led research and design on platform onboarding across eight product areas, presenting findings to the CPO and CTO. Surfaced three platform-wide patterns now used as diagnostic questions across product teams.
- Stay hands on in Figma daily, partnering with PM and engineering leads on scope and direction.

Matillion Jan 2023 – Mar 2025

Group Product Designer

B2B SaaS · Data integration & ETL platform · Remote

- **Led design on Matillion's VM-to-SaaS platform transition**, a company-defining initiative that improved adoption and retention on a technically demanding ETL product.
- **Shipped the AI Copilot**, reducing learning curve and lifting daily productivity for data engineers working on complex pipelines.
- **Built and led the design team**, setting levelling, hiring bar, and review practice.
- Unified three fragmented tools into a single product surface, which became the primary working environment for customers.

Zencargo Mar 2019 – Jan 2023

Lead Product Designer

B2B SaaS · Supply chain visibility · London / Remote

- **Directed design on the core supply chain visibility platform**, reframing the data model around cargo rather than shipments. Established the foundation later used for Zencargo's digital twin direction.
- **Set the product's trust principle**: data confidence over apparent visibility. Distinguished what is confirmed, expected, and uncertain so users could act without false certainty in a high-consequence environment.
- Managed a team of designers; introduced a cross-team review mechanism that reduced rework and ownership conflict on shared product surfaces.

Intu Jun 2018 – Mar 2019

Senior UX Designer

B2C · Retail & e-commerce platform · London

- **Redesigned search across multiple domains**, increasing usability and engagement through research-informed information architecture.
- Ran user testing, interviews, and tree testing to validate decisions and improve navigation platform-wide.

Swoon Apr 2014 – Jun 2018

UX & UI Designer

B2C · Furniture e-commerce · London

- **Redesigned the product page** with data-informed fabric selection functionality, focused on improving conversion.
- Managed a team of 3 across imagery, marketing, and branding; delivered campaigns for major publications and London Underground advertising.
